

To become a participating Country

Meeting and Events

R request a copy of the Resolution and Annex documents from LYOUN@korea.kr

- If you are in support of the aforementioned objectives and agree with the terms of the Resolution and Annex,
- You may nominate two representatives (one government official and one expert in the field of climate change) from your home country to serve as C2GMF Steering Committee members and signatories to the C2GMF Initiative.
- If you would like to observe the C2GMF proceedings before committing,
- You or your nominated representatives are welcome to participate as observer(s) at the next C2GMF Steering Committee meeting.

Submit the the following to LYOUN@korea.kr :

- Official letter with names of nominees - please include their position title, organization name, organization's mailing address, and contact information (i.e. phone, mobile, fax, email).
 - Please also indicate if he/she is being nominated as a government (g) or expert (e) representative.
- Resume and photo (jpg format) of nominees.

Upon approval of the nominations, GIR will directly contact the representatives with further information, so please make sure that contact information provided is current.

- For detailed information on past proceedings and events, go to www.gir.go.kr > English > Bulletin Board

C2GMF Workshop/Steering Committee

- Technical and administrative Steering Committee meetings, held in rotating locations two times a year
- Working Group meetings, as needed

Annual International Modeling Conference

- Annual forum held in Seoul for the purpose of sharing modeling outcomes, and discussing current topics and issues around sustainable development and green growth research

Summer Training Program

- Training held during the summer for graduate students, junior-level researchers and government officials who conduct research and practice in the field of GHG inventories and climate change mitigation analysis

※ For further information or inquiries, please contact :

Cooperative Green Growth Modeling Forum

C2GMF

About GIR :

Greenhouse Gas Inventory & Research Center of Korea (GIR) was established as a governmental institute with the vision to be a global GHG reduction think-tank for "low carbon, green growth" oriented towards 3 goals:

- 1) compilation of accurate and reliable GHG inventory and statistics,
- 2) mitigation modeling analysis to support the setting of GHG targets and implementation of policies to reach such targets, and
- 3) facilitation of global networking and outreach in the international climate change community to expand cooperation in the area of green growth.

Greenhouse Gas Inventory & Research Center of Korea

What is C2GMF?

C2GMF Steering Committee : Role and Responsibilities

Direction of C2GMF

C2GMF :

- Launched by the Greenhouse Gas Inventory & Research Center of Korea (GIR), the Cooperative Green Growth Modeling Forum (C2GMF) is a voluntary and non-binding collaborative framework for such purposes as joint modeling exercises, research and analysis, as well as efforts to improve the existing status and availability of greenhouse gas-related data and overcome institutional barriers for the advancement of green growth policies and strategies.

Objectives :

- To strengthen the expert network to advance modeling and related data collection for green growth in developing countries, and build capacity of modeling experts through continuous training and learning opportunities ;
- To lay systematic frameworks, including legal, institutional foundations to overcome barriers to advancing the current status of models and related data collection in developing countries ;
- To develop recommendations for climate change and environmental policies which simultaneously ensure economic growth and social needs, tailored to the context of specific needs of developing countries.

- The Steering Committee serves as the leading decision-making body of the collaborative C2GMF framework, and include the following responsibilities :

- Provide overall project direction and guidance
- Establish Working Groups, as required
- Designate ongoing Secretariat
- Define project proposals to be undertaken and review budgets
- Support financial resources mobilization
- Monitor implementation
- Supervise management of activities

- Two-year term, attend meetings twice a year

- Winter/Spring (Steering Committee meeting)
- Summer (Steering Committee meeting, in conjunction with annual international mitigation modeling conference)

- Actively engage in upholding C2GMF vision and objectives

- Participating countries :

- Argentina, Bangladesh, Cambodia, Guatemala, Kazakhstan, Kenya, Republic of Korea, Lao PDR, Malaysia, Mozambique, Peru, Vietnam, etc.

Core focus

- Energy issues (e.g. energy efficiency in buildings, fossil fuel consumption management and new technology options in transport sector, bio-energy and alternative fuels in agriculture/forestry and waste sectors, impacts of LULUCF, etc.)

Priority Activities

- Improve infrastructure for data collection and methodologies
- Build capacity for GHG inventories and modeling
- Promote Research, Development & Deployment (RD&D) Activities
- Facilitate sharing of information

Project Structure/Format

- The participating countries may identify and implement collaborative projects to enhance climate change mitigation modeling and supportive work (e.g. institution-building and greenhouse gas-related data improvement) in these countries.
- Joint exercises and projects are multilateral in scope and may focus on energy issues and research as it relates to:
 - a sector or industry,
 - specific policy,
 - capacity building, or
 - overcoming identified barriers to running robust models for the analysis of policy options for green growth.
- The Steering Committee may also elect to establish Working Groups, as necessary, to accomplish the objectives and implement Priority Activities of the C2GMF.
